Agenda

- Why this matters?
- Guides
- Be Careful
- Test.....
- Test again....
- Let's talk about testing.....
- Let's Chat!
- Summary...and testing.....

Why this matters?

An AI agent deleted a company's entire database in 9 seconds — then wrote an apology

OpenClaw deletes Meta executive's emails

Amazon's cloud service disruption

AI Terms/Discussion

- ChatGPT/Claude/Gemini
- Models
- AI Agent
- MCP Server

Guidance: Setup

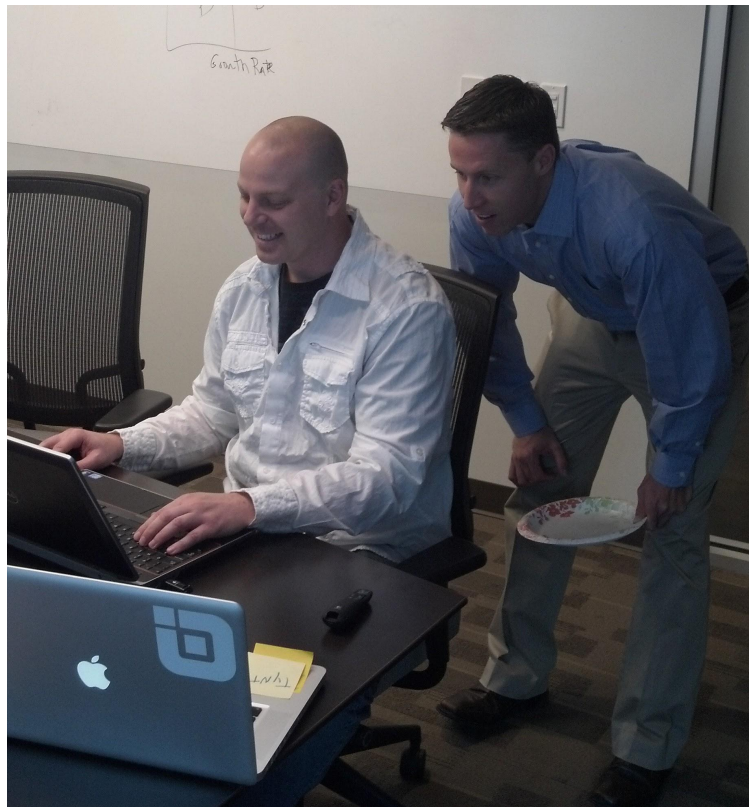

- Claude.md
- Settings.json
- VS Code

https://github.com/sqlasylum/presentation/tree/main/master_ai_prompts

Guidance: Conversing Claude.md

- Be Specific
- Write it out beforehand
- Tell it what it can't do

Example

QR code Scanner

This new directory is meant to house a program to handle scanning QR codes at an event. The QR codes will be on the badge of the attendees. Sponsors will scan the QR code with any phone, and that will take them to a link to a website with a service behind the site. The website will offer a login only if the sponsor has not already logged in. Once they have logged in they won't need to log in again. Login can be as simple as providing an email address it does not need to be secured. The service will store the ID from the QR code and the email address that scanned it. It needs to store this in a simple PostgreSQL database.

This all needs to be created in terraform so it can be deployed into a rancher image or docker image. This will either build a box in AWS or locally on a computer. All of this should be open source to use the code and the code should be checked into git.

Guidance: Limiting Settings.json

- Deny scripts/programs
- Remove permissions
- Be specific
- Iterate

Testing

- You cannot do this enough
- Build it into your prompts
- Validation through prompts
- What did I miss?
- Trust but Verify
- Jr Dba
